## Electrical Services

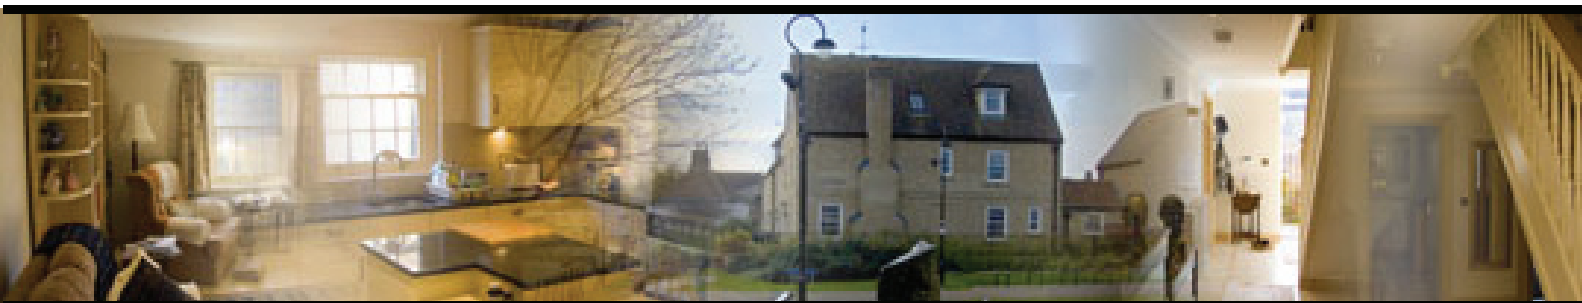

### DOMESTIC SERVICES

*We provide a comprehensive service for the domestic market, from installation of additional socket points to complete rewires and new build installations, emergency call-outs and Testing and Inspection of installations, see the list of works we have carried out recently, if your requirement is not there we are confident we can still help you.*

- Fuseboard / Consumer unit and earth bonding upgrades
- Installation of additional socket points inside and out
- Security and external lighting
- Rewiring of complete properties
- Installation of new feature lighting, including recessed spot lights
- Connection of heating control systems
- Installation of extractor fans in kitchens, bathrooms and utility rooms
- Installation of Smoke detectors
- New supplies to Garages and Sheds
- Storage heating installations and repairs
- Extension and Conservatory installations
- New build house installations.

*Quotations for all types of work are free, from the installation of an extra socket point to wiring of ten new houses, we are happy to meet you at your convenience and discuss your requirements. All domestic installation works will be registered with the Local Building Authority as required under the Governments "Part P" legislation. Inspection and Testing If you are considering purchasing a new property or selling your own and have been asked to have a survey of the installation carried out, we can provide a Domestic Visual Condition Report which will identify and immediate problems, like lack of earth bonding, lack of RCCD trip protection of circuits and deterioration of the condition of the wiring or accessories. From this we can provide a quotation for any works required. If you are a Landlord or have been asked by your insurance company to have a Full Periodic Inspection and Test of the electrical installation, we can carry these out too. This test involves a thorough test of the complete electrical installation, including Insulation of circuits, operational testing of RCCD trips, earth loop impedances and a record of all relevant results and much more. If required we can then provide a free quotation for any remedial works required.*
